

HYPERSONIC

Important Service Note!

• **Hypersonic – Protection Key Authorization**

In this package of Hypersonic you'll find a printed card with information about the Protection Key Authorization and the Authorization Code itself.

Since the Protection Key provided with the product is authorized for Hypersonic already, the printed Authorization Code on this card will not work.

Please follow these steps to install Hypersonic:

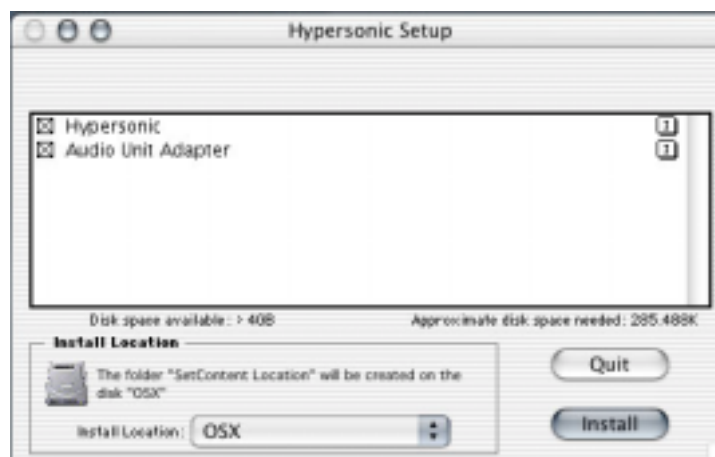

1. Insert the Hypersonic CD into your CD-ROM drive
2. Follow the instructions on the screen
3. After completing, plug in the hardware protection key and follow the driver installation instructions.

If you already have a USB protection key for Cubase or Nuendo, you can transfer the Authorization Code licence from the Hypersonic Protection Key to an existing key.

Please find informations about the license transfer in the online help of the License Control Center application (found in the Start/Applications menu). This application allows you to view your USB protection keys and authorize them for applications.

• **Installation of the Audio Unit Version (Mac OS X)**

If your host application does not support the VST format but does handle the Audio Unit format, please make sure to check the Audio Unit Adapter box as shown in the screenshot below, and follow the instructions on the screen.

Enjoy Hypersonic!

Your Steinberg/Wizoo team
